

SCHMID COLLEGE **SCIENCE FORUM**

THE PRESENCE, PERCEPTION, AND POTENTIAL OF SOCIAL METACOGNITION IN SMALL GROUP WORK

STEPHANIE HALMO,

Assistant Professor of Biology,
University of Washington

WEDNESDAY, MAY 6TH

12 - 1 p.m. in AF 201

This talk explores the concept of social metacognition – how individuals monitor and regulate their own thinking and the thinking of others when learning in collaborative settings.

Drawing from research in biology education, attendees will learn about the ways undergraduate students monitor and evaluate ideas during group work, how undergraduate students perceive the use of social metacognition when working in small groups, and potential instructional approaches to help students use these skills during activities that require collaboration.

Hors d'oeuvres and refreshments will be served!
