WEBINAR

June 29, 2023
11:00 am – 12:00 pm

Designer and Targeted Contrast Agent for Photoacoustic Imaging

Key Points:

- Details on the synthesis of a NIR contrast without the need of a nanocarrier.
- Learn in detail about what characteristics a contrast agent should possess to qualify as a clinically translatable technology.
- Become familiar with methods to create a targeted contrast agent.
- The use of this contrast agent in imaging small animals such as mice and its compatibility with a system such as TriTom.
