

Weekly Work 12 – Due Tuesday, Apr 15th at 11:59pm

For Weekly Work 12, you should pick two exam review problems on two different topics and complete them.

Problem Requirements:

- The problems you choose should cover different topics being tested on Exam 3
- The problems should be complex enough to be a free response question
- The problems should NOT be pulled from one of the practice exams that are posted on Canvas. You can find problems in our textbook or from one of these open-source online textbooks: <https://activecalculus.org/multi/book-1.html> or <https://openstax.org/books/calculus-volume-3/pages/1-introduction>.

On Canvas, turn in (as a single pdf):

- (*6 points*) The statement of each of your problems AND a worked out solution for each
- (*1 point*) The topics covered by each problem
- (*1 point*) Where you pulled each problem from
- *2 points* for picking problems that are relevant to Exam 3 and complex enough to be a free response problem on the exam
